About us

Tuxera offers ultra-reliable data solutions for critical workloads.

Tuxera is the leading provider of quality-assured file systems, software flash controllers, and networking and connectivity solutions. Our software is in mission-critical systems around the world. We make sure data is secure, accessible, and intact precisely when you need it.

Tuxera's customers include car makers, device manufacturers, industrial equipment manufacturers, data-driven enterprises, cloud storage vendors, and

many more. We help them solve complex challenges involving data in all its states – at rest, in use, and in motion.

Tuxera's customers include car makers, device manufacturers, industrial equipment manufacturers, data-driven enterprises, cloud storage vendors, and many more. You can also find us as members of JEDEC, SD Association, The Linux Foundation, and other industry associations. Founded in 2008, Tuxera's headquarters are in Finland, with regional offices in China, Germany, Hungary, Japan, South Korea, Taiwan, and the US.

More about us

Our expertise

PERFORMANCE

Our software is always optimized for the hardware it's coupled with. This means you always get the maximum performance possible from the hardware. We engineer fast, energy-efficient data management solutions with low CPU use and memory consumption.

RESPONSIVE TECHNICAL SUPPORT

Customer support and problem-solving are our company cornerstones. Our team of data management experts support you all the way from evaluation to implementation, ensuring your project performs flawlessly and on schedule. We offer customer support in 15 languages. Our support and engineering teams are in multiple offices spanning across all time zones to respond to you in a timely manner.

ENDURANCE

Flash memory technologies that people use to store data don't last forever. The continual process of writing and erasing data degrades the endurance of the memory, harming device reliability. Lifetime is critical where systems must last many years under harsh conditions, like in automotive, defense, space, industrial, and medical applications. Tuxera's data and storage management solutions are designed to help get the most out of the limited lifetime of flash memory.

DATA ACCESSIBILITY

Tuxera's software ensures that external storage devices such as memory cards and USB drives will always work with all devices and operating systems. Our file systems and networking software work with all the necessary industry standards to ensure data is seamlessly accessible.
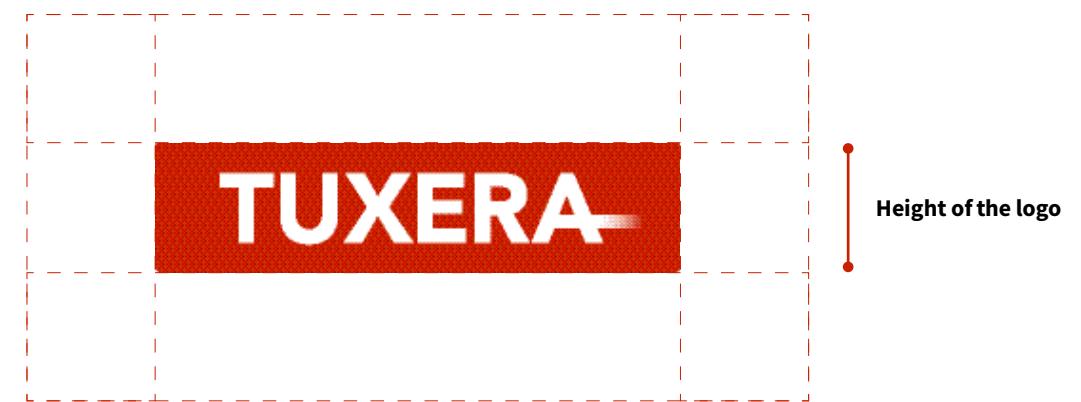

STORAGE AND DATA MANAGEMENT EXPERTISE

We have over 30 years of experience working with embedded systems and storage, with an extensive storage software patent portfolio. Tuxera also has the largest team of file systems engineers, flash software, networking experts, and storage developers in the world. A true benefit of this expertise is faster time to market – we save you time and hassle over stumbling through data management on your own.

RELIABILITY

Fail-safe by design, Tuxera's storage software ensures that no data is lost or corrupted during power loss or system crashes. Plus, our networking software ensures data gets where you need it securely.

Our logo

Bold and easy to identify, the company logo is simple, distinct, and practical.

Our vision

To make all data easy to manage and accessible exactly when and where people want it.

We live in an age of data-driven everything – where data loss means loss of precious moments, loss of device functionality, or even risk to mission-critical operations. Every millisecond of data capture is important. That's why we see ourselves as the protector of data integrity, accessibility, and longevity. And it's why we make sure your data is safely stored and transferred rapidly wherever you need it.

Our main product portfolio

EMBEDDED FILE SYSTEMS

Tuxera EdgeFS
Tuxera NitroFS
Microsoft exFAT by Tuxera
Microsoft FAT by Tuxera
Microsoft NTFS by Tuxera

FLASH MEMORY SOFTWARE CONTROLLER

Tuxera FlashFX Tera

EMBEDDED NETOWORKING & SECURITY

Tuxera TCP/IP Stack
Tuxera CryptoCore

ENTERPRISE-GRADE STORAGE MANAGEMENT

Tuxera Fusion SMB

Our data storage leadership

We work with the industry's best. Tuxera has close relationships with the leading chipset makers, memory manufacturers, and software companies. Together, we build and develop storage roadmaps and technical specifications. We collaborate on storage research projects, proof of concepts, and joint demos for key industry events. This close cooperation translates into continual innovation. But most importantly, it ensures our solutions are compatible with all the major platforms and operating systems, get the maximum performance on any hardware, and are fully customizable for our customers.

Shaping international standards

We're active members in key industry associations.
